Great book for kids and adults

By William A. Kelly

This book was published in 1970. As a child 40 years ago I checked this book out from the local library and built most of the flying airplane models from the straightforward plans printed full size in the book. I recently bought the book used for the memories it evoked. This is also a great book for children of today who need a break from computers and other electronic devices. There is no experience comparable to building something from scratch and seeing it work, something which children and even some adults may need to learn. Go to any hobby shop and buy the balsa wood. The projects are mostly airplanes, but you can also build a boat, a car, a kite, etc. Highly recommended.
