ORIGAMI INSECTS (DOVER ORIGAMI PAPER-CRAFT) BY ROBERT J. LANG, ORIGAMI PDF

In this book, noted origamist Robert J. Lang has created 20 challenging designs depicting insects, spiders, and related creatures, long considered among the most challenging of origami subjects to design.

Among the projects are a treehopper, spotted ladybug, orb weaver, tarantula, tick, ant, butterfly, scarab beetle, cicada, grasshopper, dragonfly, pill bug, praying mantis, paper wasp, samurai helmet beetle, scorpion, and more. For each project, the author has supplied clear step-by-step instructions and diagrams. You'll also find helpful sections on symbols and terms as well as general folding directions. Intermediate to advanced paperfolders will find hours of challenge and satisfaction in creating the cleverly designed creatures in these pages.

An amazing book

By Eric Anderson

Origami Insects and Their Kin is absolutely my favorite origami book. All but the first model are extremely challenging, and the first one would be given a "complex" rating in any book. I can't stress this enough: if you are bored with the origami books you have because they are too easy, THIS is the book you are looking for. The only downside is that everything else pales in comparison afterwards! The insect models in this book are what one expects of Robert Lang, and then some. They are all beautifully rendered, and amazingly,

they're simple enough in design that it's hard to imagine taking any of the details away. The models are so difficult because Lang chooses great subjects, from the exotic-looking Black Pine Sawyer, Samurai Helmet Beetle, and Long-Necked Seed Bug, to the common (but still beautiful) Pill Bug, Dragonfly, and Ant. It's difficult to continue elaborating on *Origami Insects and Their Kin*, because after several years it still makes my jaw drop, leaving me speechless. This book stands head and shoulders above any other origami book I have seen, for complexity and model quality. If you can't stand insects, perhaps this isn't the book for you. If that's not a problem, then why haven't you already put a good fifty hours into this book?

Can I give it 6 or 7 stars?

By Sen Peng Eu

In my opinion, the books to date containing the most complicated and outrageous origami models are the following: Kawahata's *Dinosaur*, Issei's *Supercomplex*, and this *CHAMPION*, Lang's *Insects*. Every model here needs a lot (really a lot) patience and many-year folding experience. Or you **MUST** fail in folding over half of them. There are lots of unexpected and new technics, every model is in a neatly calculated mathematical proportion and with the exactly right number in every part (eyes, legs, antennas, etc.) In Facing such a book, I completely, deeply, adore the art of origami.

Wow!

By A Customer

An awesome book! Contains some of the most beautiful folds I know, as well as some of the hardest. Here's what you get:

1. Treehopper: A rather simple bug, good introduction to the book.
 2. Spotted Ladybug: An AWESOME exploration of color-contrast! Looks great when folded from the right paper even though it is not 3D.
 3. Orb Weaver: What should I say, well it's a spider...
 4. Tarantula: Another spider but with ten legs. If you do it right it looks much like the real thing.
 5. Tick: This comes as a hungry and a sated tick. Easy to fold and looks good.
 6. Ant: This is absolutely my favourite origami model! The ant is so awesome, I can't find words for it. You just have to fold it to believe it plus it's pretty easy to fold too.
 7. Butterfly: Well folks that's a real butterfly with legs and it's really hard to fold.
 8. Scarab Beetle: Egyptian bug.
 9. Cicada: Looks GREAT when folded well but is probably the hardest model in the book.
 10. Grasshopper: Green, long legs.
 11. Black Pine Sawyer: Has really long antennae and looks really cool.
 12. Dragonfly: Not very realistic, has a "cartoon" style look.
 13. Hercules Beetle: A fat bug that looks good when folded well.
 14. Long-Necked Seed Bug: I had never heard of this bug before. Doesn't look bad though.
 15. Pill Bug: Not easy to fold but a great-looking and unique model.
 16. Praying Mantis: Very hard.
 17. Stag Beetle: Good looking and fairly easy.
 18. Paper Wasp: Requires you to do something I would have thought impossible before reading this book. Extremely hard.
 19. Samurai Helmet Beetle: Beautiful model but hard to fold.
 20. Scorpion: Comes out pretty thick but can look nice too.
- After all, a great book, if you are an advanced folder buy it!
